

NATURAL ACNE CREAM **100% All Natural Formulation**

YOU ARE 30 DAYS AWAY FROM CLEAR AND HEALTHY SKIN USING NATURAL ACNE CREAM

- Nature's Pharma offers unique 100% natural/organic ACNE Cream in the form of water-soluble triple emulsion/suspension providing transdermal delivery of microencapsulated biological active ingredients through the skin. ACNE Cream is produced by a revolutionary US-patented technology and does not cause side effects on normal, sensitive, and hypersensitive skin.
- Acne is a skin disease (involving comedos (whiteheads or blackheads), papules, and pustules on the face, the chest, and the back). Acne is caused by: (i) hyperseborrhea, (ii) stricture of hair follicles, and (iii) proliferation of *Propionibacterium acnes* (the gram-positive anaerobic bacteria in the pilosebaceous gland). Acne treatment is focused on the removal of the above-mentioned three causes: (1) female hormones are used for suppressing of hyperseborrhea, (2) keratolytic substances (salicylic acid, resorcin, etc.) are used to eliminate stricture of hair-follicles, and (3) bacterial disinfectants (chlorhexidine gluconate and etc.) are used for inhibiting proliferation of bacteria. Treatments of acne include: (i) regulating diet, (ii) local skin cleansers, (iii) interdermal anti-inflammatory agents, (iv) administering antibiotics, (v) topical keratolytic agents (benzoyl peroxide and retinoic acid), (vi) estrogenic agents and anti-androgens to decrease sebum production in sebaceous glands.
- In many cases, antibiotics and hormone therapy are the only recourse, but with the use of Natural Acne Cream positive effects are apparent usually within three days of the start treatment.
- Natural Acne Cream (i) has high effectiveness, (ii) causes low (in the most cases, no) skin irritation, (iii) causes small (in the most cases, without) side effects, and (iv) good physical and chemical stability. This cream comprises (a) mixture of the plants' oils having biologically active ingredients, (b) the microencapsulated sulfur, zinc oxide, the microencapsulated vitamins A, and E, and (c) natural biological active ingredients.

- Most topical treatment used today are **not** effective, or in many cases, can cause further skin irritation instead of healing the problem, since the most from topical treatment creams contain chemical ionic surfactants, thickeners, gel (emulsion) formation polymeric agents, and etc., which block pores and block active centers of biological active ingredients significantly decreasing the healing activity. Natural Acne Cream contains 100% all natural ingredients has high healing efficiency without adverse side effects and may be used for dry and sensitive skin.
- Introducing a new topical formulation created just for any kind of the skin including dry and sensitive skin
- Acne control is most effective when only a very small amount is applied.
- After your skin has been cleaned, use a very small

amount at bedtime as a preventative, to prevent recurrence on the area where you normally would have a flare up.

- For the first 2 to 5 days of using of Natural Acne Cream may increase inflammation and/or redness since the infection coming out of your pores, and should not alarm you. After one week, you will see significant clearing of the skin.

Purpose

It is useful for the treatment of acne, clears up acne redness and allows skin to heal. Penetrates in pores to control acne and helps keep skin clear of new redness. Helps prevent the development of new acne. Acne cream is a water-soluble product, which easily removes with water so that removal does not cause additional pain or tissue damage.

Biological active ingredients of natural acne cream:

- reduce inflammation
- stimulate antibacterial and anti-microbial activities
- decrease transdermal water loss
- increase cellular turnover, strengthens skin
- stimulate anti-aging and anti-oxidant properties
- diminish appearance of broken capillaries
- stimulate as co-factor the production of collagen
- improve tone and texture
- reduce irritation, itching, and discomfort of the skin
- stimulate of blood circulation.

Directions

Cleanse the skin thoroughly then apply a small amount of the acne cream covering the entire affected area with thin layer one to three times daily. Because excessive drying of the skin may occur, start with one application, and then gradually increase to two or three times daily if needed or as directed by a doctor. If excessive skin irritation develops or increases, discontinue use and consult a physician.

100% ALL NATURAL INGREDIENTS
